ANALYST

PROJECT OVERVIEW

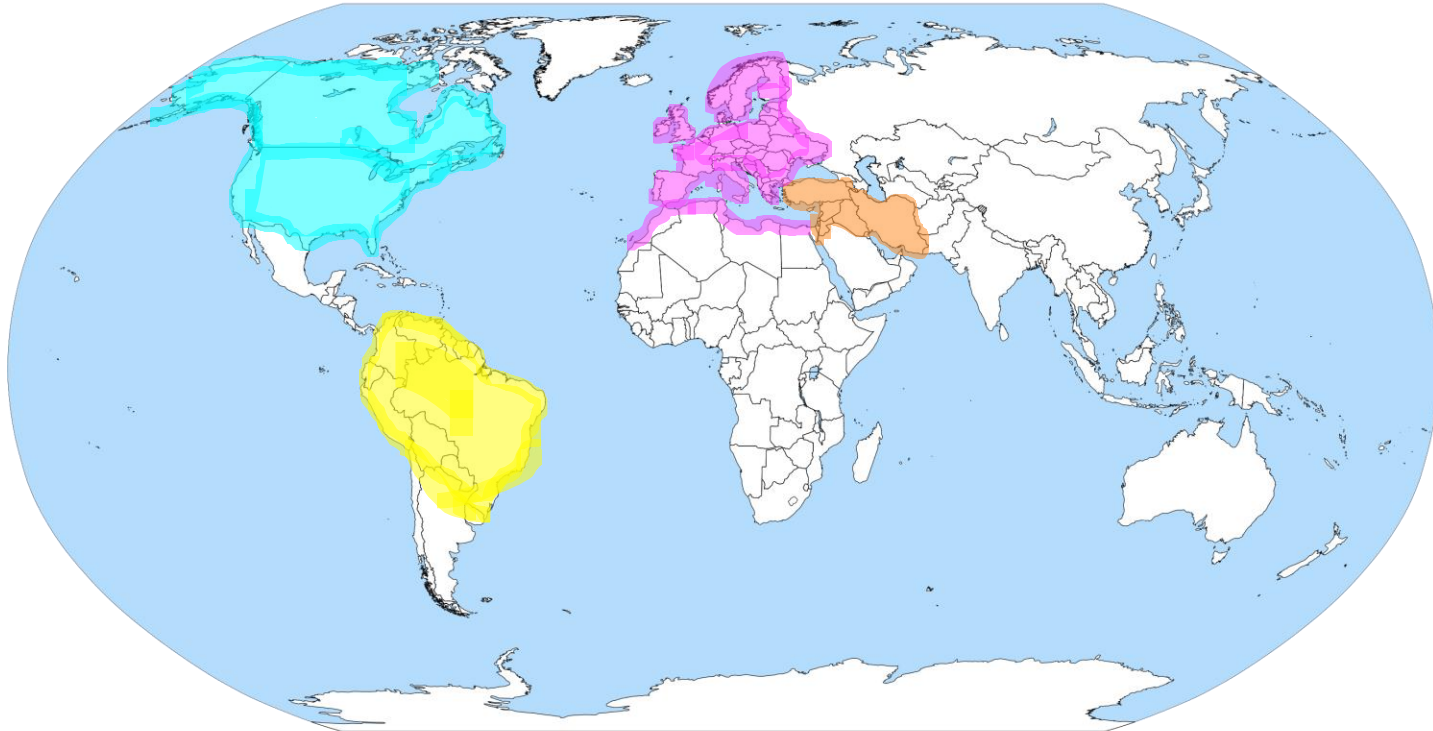

FinMango is a non-profit financial literacy, security and stability company, focusing on the migration issues in under-funded policy zones, especially those forced by climate change.

Our project this semester focused on researching the legal frameworks and social protections for migrant workers in a selection of major destination countries and assessing how these regulations impact the working conditions, safety, and overall well-being of migrant laborers in each.

This research was done in support of the Climate Migration Trend Scanner Project.

Research Areas

Walter, South America

Overview

- Political, social, and economic forces have created large migrant crisis
- Political shift of host countries: tighter border security and admission process
- Displaced migrants with little place to go move North creating a crisis in both Central and North America

Challenges

- **Political unrest:** Coupes, assassinations, corrupt politicians, gang violence, and poor working conditions/wages
- **Receptive nature of host country:** stigmas and stereotypes, lack of community, and divisive opinions
- **Limited access to capital:** Poverty, hesitancy from traditional institutions, wage discrimination, and economic climate.
- **Bureaucratic processes:** VITEM(similar to green card), VITEM V, lengthy waiting time, paradoxical rules and regulations, and work visas

Major Players

- **Haiti + Venezuela:** Largest current diasporas of migrants being displaced due to extreme political unrest
- **Brazil:** One of the historically larger receiving countries for migrants facing a swing politically to tighter security as the Haitian crisis ramps up
- **Argentina:** Drug activity and gang violence leads to a successful movement to make it harder for migrants to enter

Trends

- Stigma along with heightened crime and violence has led many countries to cut the influx of migrants into their country
- Migrants with nowhere to go thrown into poverty as they look for a receptive country. Responsibility for the migrants falls on host country. 60% of a counted 10.7 million South American migrants fled to North America in 2021
- The massive quantity of migrant workers leads to rampant wage discrimination and an underpayment of migrants that can work. This has helped several large industries like Oil and gas, but created a massive crisis.

Esme, North America

Overview

- Extreme backlog in integrating migrants, leads to mass illegal migration
- Emphasis on combatting labor shortages with immigrant workers
- Green Card / PR Card
- Overall positive view of immigration, would be open to immigration reforms given current administrations

Challenges

- Green Card accessibility = necessary for financial independence, many hurdles to jump that risk deportation
- **Socialization** = maintaining differentiation but integrating immigrants as active members of society (Canada)
- **Labor force** and work visas = there is a gap to fill, backlog in filling it
- **Crisis at the border** = detention camps, xenophobia, prejudice

Major Players

- **United States:** built on immigrants; immigration policy is highly malleable and highly partisan; most immigration from Central / South America; pull factor is economic liberty and mobility; present government supports immigration, still lacking systems for implementation
- **Canada:** affinity for immigrants as crucial to labor market; heavier immigration from Europe and South Asia; many systems for welcoming immigrants, although overeager in integrating them

Trends

- Anti-immigration sentiment across North America
- Hostility and chaos in countries of origin (pushes more immigrants towards North America)
- Increased foreign-born labor force
- Multi-country cooperation to combat immigration crisis (LA Declaration on Migration and Protection)

Dawson, Europe

Overview

- Explosive immigration growth, heavy refugee crisis
- Lack of nationalization policies leading the widespread unresolved migration issues.
- Inability to assimilate various groups effectively into economy leading to issues with poverty, crime, and relations.
- The influx of refugees from every quarter straining traditional coping policies. Climate, War, Economic and Persecution drove people to Europe from the across the world.

Challenges

- **High volume refugee crisis:** Creating migrants with little to no verifiable work background, identity or transferrable skills.
- **Racial and national tensions:** strong belief in "us first systems", dependence on cheap immigrant labor coupled with inefficiency in allocating.
- **Long-term lack of birthright citizenship:** identity-less and misplaced refugees now create roadblocks for generations to come.

Major Players

- **Sweden:** the most accredited in immigration policy. Able to restrict immigration numbers and assimilate through an intensive two-year program. Citizenship within 5 years.
- **Luxembourg :** Most heavily dependent of all European states on external labour. Allocating high resources to solving the assimilation problem, bringing in and stabilizing service work.
- **Italy:** Struggling with high numbers of refugees along its extended coast, and unable to adequately process numbers. Effective case study for migration influxes due to climate.

Trends

- Europe facing scaling and globalizing immigration trends moving away from concentrated areas to broader and more consistent international movement. Asia Pacific accounted for more that 30% of all recent immigration.
- Growth in large-scale naturalization programs has enhanced disparity in treatment for migrants in overrun southern economies compared to more controlled northern.
- Nearly 22 Million "forcibly displaced and stateless people in Europe"(UNHCR) as of 2023. 29% rise in arrivals from Mediterranean and North African Routes

Srimaan, The Middle East

Overview

- Significant increase due to conflicts and economic opportunities
- Migrant workers seeking opportunities in construction and services industries
- The highest global share of migrant workers as a proportion of the total workforce, nearly half of all workers being migrant

Challenges

- **Employment Rights:** Migrant workers subjected to labor laws that do not adequately protect them, lack of protection against employer abuse, passport confiscation, etc.
- **Legal Protections:** Kafala system binds migrants to sponsors, restricting entry, job changes, and exit, risking potential abuse
- **Economic Vulnerability:** Migrant workers suffer job insecurity and lack support during crises and economic downturn (COVID)

Major Players

- **Saudi Arabia:** Hosts the largest number of non-displaced, international migrants in the region with 10.2 million, driven by demand for labor in various sectors including construction and domestic work
- **UAE:** 8.0 million non-displaced international migrants, known for its expatriate-friendly policies and significant economic opportunities
- **Qatar:** 75% of population is migrants, key destination for economic immigrants from South Asia

Trends

- Number of migrants doubled from 25 M to 54 M, migrant share grew from 7% to 13%
- Economic opportunities in oil-rich Gulf countries attracted many while conflict in nations such as Syria, Iraq, and Israel/Palestine are leading to many displaced individuals
- Jordan, Syria, and Lebanon host the most displaced migrants while Saudi Arabia, the UAE, and Kuwait host the most non-displaced migrants

Independent and Stable

Our initial research was too broad to be of use. In trying to find our path, Scott Glasgow(CEO) offered a specified approach.

The concept of a measurement for independent and stable, what he saw as the benchmarks for generational improvement.

Citizenship

Citizenship is the only broad-based metric to satisfy all the requirements.

Comparing Citizenship Requirements

	CAN	USA	BRAZ	ARG	S. ARABIA	UAE	SWEDE	LUX
PUBLIC SERVICES	Y	N/Y	N/Y	N	N/Y	N/Y	N	N/Y
RESIDENCY (YRS)	3	5 (or 3)	4	2	10	30	5	5
WORK EXP.	2 YRS	N/A	Offer	Offer	Offer	Offer	Ver.	Offer
BIRTH RIGHT	Y	Y	Y	Y	Y	N	N	N

Comparing Citizenship Requirements

APPENDIX A

Countries Studied (in order): United States, Canada, Brazil, Argentina, Saudi Arabia, United Arab Emirates, Sweden, and Luxembourg

Public Services: present, robust, and accessible welfare services to help immigrants assimilate and gain independence

- N/Y refers to public service programs which exist, but are selective and hard to access

Residency: refers to the number of years necessary for the immigrant to have been living in the new country to gain citizenship

- USA: 5 (or 3) means 5 years is the standard, but the length of residency is 3 years if married to a US citizen

Work Experience: refers to the occupation status necessary to gain citizenship

- Sweden: "Ver." Means immigrants must have verified information about past work experience

Birthright: refers to if people born in this country are automatically citizens

Maps – Difficulty of Migration and Net Immigration/Emigration

Figure 19. Conflict displacements (top) and disaster displacements (bottom) in 2020 by location

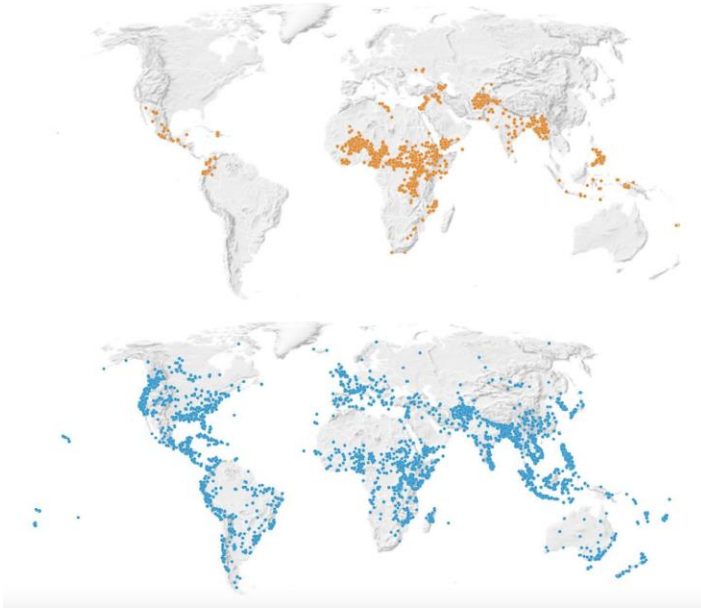

Figure 1

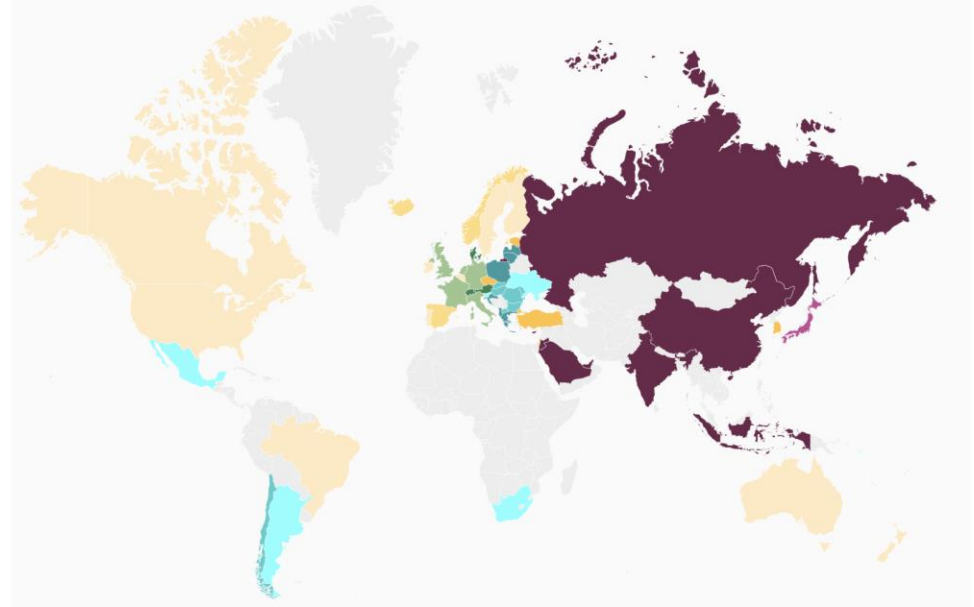

Figure 2

Maps

APPENDIX B

Figure 1: World Migration Report, 2022

- Orange = displacement from conflict / violence (42 instances in 2020), by location
- Blue = displacement from disasters (often related to climate change, 144 instances in 2020), by location

WORLD MIGRATION REPORT 2022

Figure 2: Mipex.eu, Status of Integration Policy – Measures Democracy as it relates to Immigration

- Measures basic rights, equal opportunities, and secure future to determine quality of overall approach to immigrant integration
- Light Yellow = comprehensive integration, top 10 – guarantees equal rights to work, training, and health
- Light green = temporary integration, slightly favorable – immigrants have basic rights, but unequal security and obstacles to settling
- Bright Blue = Equality on paper, halfway favorable – immigrants enjoy equal rights and long-term security, but not equal opportunities
- Dark Purple = Immigration without integration – immigrants are denied basic rights and equal opportunities

Mapping Population Information

Three Key Areas of analysis

1) Population per unit Area

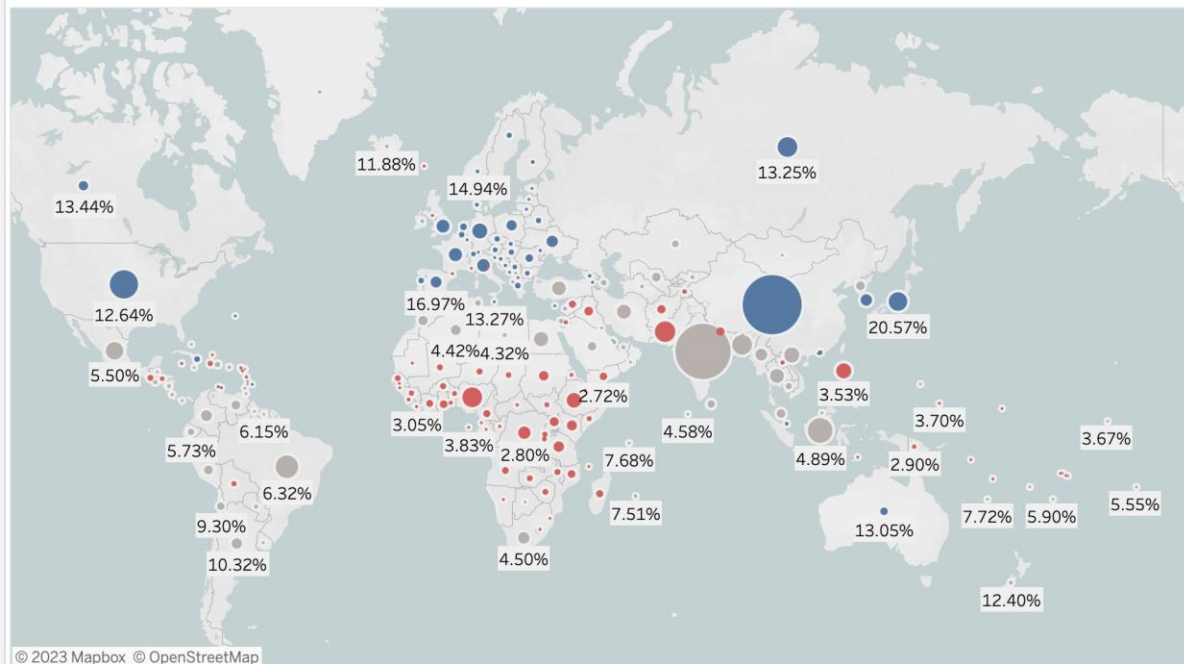

2) Birth Rate

3) Aging current population

Secondary Considerations

- Developed Economy
- Agricultural Exports
- Unemployment Rate

Population and Birth Rate

Data Source: <http://data.worldbank.org/data-catalog/world-development-indicators>

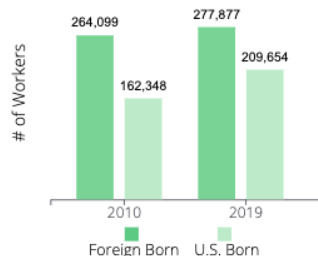

United States : American Immigration Council Data

Crop Worker Average Age

Number of Crop Workers

United States:

93,937

H2-A farm workers in 2010

275,407

H2-A farm workers in 2020

+193.2%

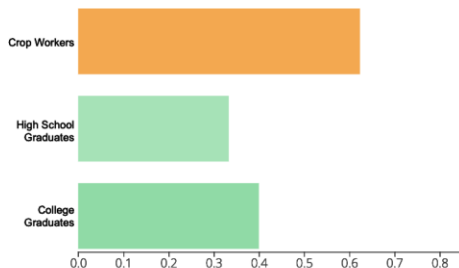

Top crops specified on H2-A visa:

**Apples,
Blueberries,
& Strawberries**

Includes workers in crop, livestock, dairy, fisheries, and general farming

Wage Growth, 2005-2020

Temporary visa agriculture is a strong and growing employment opportunity

Can we transition from the temporary visa archaic system to a permanent residence model?
